

Extracting Financial Data From Unstructured Sources: Leveraging Large Language Models

Huaxia Li¹ Haoyun (Harry) Gao¹ Chengzhang Wu² Miklos Vasarhelyi¹

¹ Rutgers, The State University of New Jersey ² Stockton University

Motivation

A large amount of accounting data is stored in unstructured formats, such as PDF files.

Contract

Motivation

- Advancements in large language models (LLMs) offer great potential
 - Transform human-generated unformatted information into machine-readable standardized databases (Gu et al., 2023)

- Develop an LLM-enabled framework that can extract financial data from unstructured sources
 - Provide valuable insights for market participants, policymakers, and researchers.

Introduction

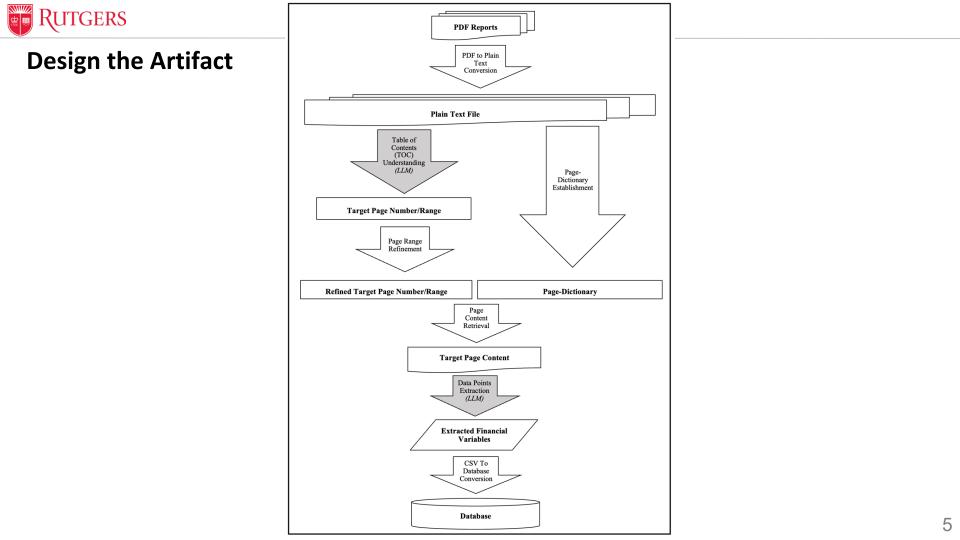

- Develop an LLM-enabled framework that can process PDF-formatted data source and extract predefined financial data from it
- Following the six-step **design science** research methodology
- Incorporate data preparation, prompt engineering, batch querying, and database construction
- Illustration: Extract financial data from local government's annual financial reports (ACFR)
 - There is no centralized, electronic, and publicly accessible database of governmental financial data (W. J. Kim, Plumlee, and Stubben 2022)
 - ACFR is the primary source of a comprehensive set of financial information for U.S. local governments.

Objectives of the Framework

- Effectiveness
 - Extracted data can be matched with the manual extracting results by human experts

- Efficiency
 - Maximize the efficiency of extraction and make sure the extraction can be automatic in batches

Design the Artifact

Design the Artifact - Data Preparation

- PDF to Plain text conversion
 - Facilitate machine readability
- Table of Contents (TOC) understanding
 - Extract the targets page number/range
 - Increase accuracy
 - Save computational cost
- Page Range Refinement
 - Shorten page range (e.g., Notes)
- Page Dictionary Establishment
 - Transform long document (e.g., annual report)

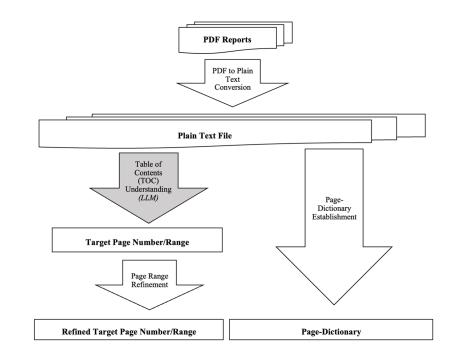

Illustration - Data Preparation - Page Dictionary Establishment

Design the Artifact - Prompt Engineering

• Systematic development and optimization of prompts to enhance interactions in alignment with specific objectives or requirements

Design the Artifact - Prompt Engineering

- Instruction Learning (Chung et al. 2022; Gu et al. 2023)
 - Tasks described through explicit instructions

Example

[Role and Context]: "You are an assistant who is good at extracting financial information from unstructured textual data."

[Rule]: "Strictly obey the following rules when extracting:

Rule 1. Find each value by recognizing the relevant row and column names.

Rule 2. Output in the JSON schema: {"Total Asset": [], "Total Expenditure":[]}

[Task]: "The page content is a financial statement. Extract the following values from the statement:

1. Row "Total primary government" for column "Expenses"

Illustration - Prompt Engineering - Zero/Few Shot Learning

- Zero/Few-shot Learning (Brown et al. 2020; Kojima et al. 2022; Zhao et al. 2021)
 - With or without examples in the prompt

Example

[Task]: "Row account "Long-Term Liabilities" for column "Total":
 a. Some example names for the line items: 'Lease liability', 'Compensated
 absences payable', 'Post-closure care costs'."

Illustration - Prompt Engineering - CoT Prompting

- Chain-of-Thought Prompting (Gao et al. 2023; Gu et al. 2023)
 - a series of short, interrelated statements or sentences, serving to direct the reasoning process
 of the LLM in a manner similar to how a human might approach a task

Example

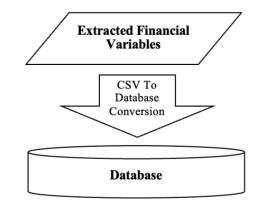

[Task]:

What is the <u>first page</u> containing the Statement of Net Position? <u>Assign it to A</u>. What is the page number/range of the <u>immediate next statement</u>/item following A? <u>Assign it to B</u>.

Form list_1 with A and B in [A, B] list format.

Design the Artifact - Batch Querying with LLM & Database Construction

- Existing LLM research in accounting
 - Rely on user interface (UI) for interaction
- We formalize prompts as a Python function
 - Easy of deployment, maintenance, adaptation
- Preprocess the data extracted from LLM
 - Unify data unit, format..
- Database Management System (DBMS)
 - PostgreSQL
 - Relational database

Evaluation

- Evaluation of effectiveness and efficiency
- Regular meetings with GFOA to obtain expert review

| | GPT-4 - initial test | GPT-4 - refined prompts | Experts |
|-----------------------------------------|-------------------------|----------------------------|---------|
| Total Count of Data Points | 152 | 152 | 152 |
| Actual Count of Correct Data Points | 146 | 152 | 150 |
| % Correct Data Extraction | 96.1% | 100% | 98.7% |
| % Average Absolute Variance | 0.03% | 0% | 5.2% |
| Total Time to Extract Data (in minutes) | 8 | 4 | 200 |
| PDF Conversion Time | 4 | NA | NA |
| Code Running Time | 4 | 4 | NA |

Conclusion

- Introduces a framework for the extraction of financial data from unstructured PDF format, employing state-of-the-art LLM technology.
- Contributions:
 - Devise and validate a framework to extract financial data from unstructured sources
 - Shed light on the potential of LLMs as an alternative approach to traditional costly data standardization methods:
 - Data labeling (XBRL) \rightarrow Data post-processing (LLM extraction)
